## Vacancy Details

**Job Title:** Software Developer Intern

**Vacancy description:** As a software developer for Cambridge Animal Technologies Ltd you will be working on our flagship Smartbell product line, developing new disruptive technology in agritech. Project will include working end-to-end platform, with opportunities to be involved in aspects of architecture design and hands on development across all layers of the platform stack. You will have the unique opportunity to work directly with the core team with over 10yrs of experience building enterprise scale software products.

If you are excited about playing a pivotal role at the start of an exciting technology growth in an early stage start up, this is the right role for you. The role offers a dynamic work environment with potential long-term opportunities in the team.

**Vacancy:** Full-time or part-time, short term/temporary

**Positions:** 1

**Salary:** Dependent on experience

**Start Date:** September 2016

**Location:** Cambridge

**Person Specification:** Computer Science degree or equivalent software development experience required. Demonstrable experience of all layers of software stack, from database to API development, would be preferred. Experience can be as part of your research work or other demonstrable contribution in application development.

The role is best suited for a self-starter who thrives in a start-up environment and enjoys working on different aspects of a complex and evolving project. Good communication skills and ability to work with changing requirements is expected.

## Application Details

**Application method:** Please apply with a resume and a brief cover letter explaining your most relevant background and experience.
